- Easy to add products/categories
- Online statistics for products/customers
- Payment and shipping modules included
- Multiple ways for customers to pay
- Tax zones/delivery zones
- Multi-language support
- Built in search facility for customers

Secure Certificates

If you are taking orders through your website or capturing information from users which needs to be kept secure you need a secure certificate. This gives the user confidence in knowing that their information is not going to be stolen or used by others, and is displayed as a padlock within their browser. There are two levels of secure certificate which you can choose from:

Domain Validated

Ideal for startup businesses - provides secure certificate with onscreen padlock, the users information is encrypted. This level of certificate verifies to the user that the domain name is genuine and that the site is secure. It does not verify you are who you say you are but it does give the consumer confidence to make a purchase.

Business Validated

Total Security - provides secure certificate with onscreen padlock, the users information is encrypted. This level of certificate verifies to the user that the domain name and your business is genuine, and reasonable checks have been made to prove this. In order to purchase this we will contact you to obtain proof of trading which is required before the certificate can be issued.
